Project Details

MODEL

Standard agriculture

YOUR INNOVATION

YOUR POPULATION

Estonian sheep and goat farmers

Adoption Level

TIME TO NEAR-PEAK
ADOPTION LEVEL
(years)

PEAK ADOPTION LEVEL
(percent %)

Predicted adoption levels

IN 5 YEARS FROM START

IN 10 YEARS FROM START

TIME TO 50% OF PEAK ADOPTION
(years)

NOTES: The predictions of Peak Adoption Level and Time to Peak Adoption Level are numeric outputs that are provided to assist with insight and understanding and like any forecasts should be used with caution. Time to Near Peak Adoption represents the time to 99% of the maximum predicted adoption level.

Adoption level S-Curve

The following chart shows how the level of adoption in the relevant population of farmers changes over time.

Yearly Adoption Levels

Year	Adoption %
1	0
2	1
3	3
4	6
5	10
6	15
7	20
8	27
9	33
10	39
11	45
12	50
13	55
14	59
15	62
16	65
17	67
18	68
19	69

20	70
21	71
22	72

(Peak Adoption)

Changing the adoption levels

Many of the factors can be changed by activities such as extension. Based on the data entered, the ADOPT model suggests that changing the following factors would have the biggest effect on adoption.

Changing the peak adoption level

MOST SENSITIVE QUESTION

4 Enterprise scale

On what proportion of the target farms is there a major enterprise that could benefit from the innovation?

YOUR RESPONSE

About half of the target farms have a major enterprise that could benefit

STEP UP RESPONSE

A majority of the target farms have a major enterprise that could benefit

STEP DOWN RESPONSE

A minority of the target farms have a major enterprise that could benefit

Changing the time to peak adoption level

MOST SENSITIVE QUESTION

7 Trialable

How easily can the innovation (or significant components of it) be trialled on a limited basis before a decision is made to adopt it on a larger scale?

YOUR RESPONSE

Difficult to trial

STEP UP RESPONSE

Moderately triable

STEP DOWN RESPONSE

Not triable at all

Sensitivity Analysis

The following charts show the effects on Peak Adoption Level and Time to Peak Adoption of single step changes up and down for all questions.

Peak level, sensitivity analysis

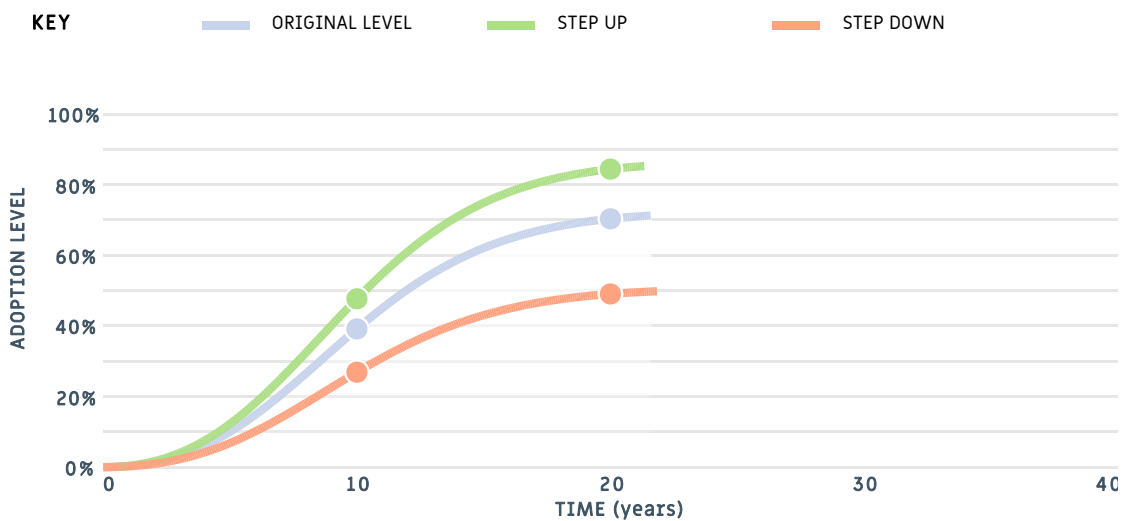

Time to peak, sensitivity analysis

S-Curve Sensitivity

The following chart shows how the S-Curve is predicted to change when a single step change is made to the most sensitive question(s) with respect to Peak Adoption Level

The following chart shows how the S-Curve is predicted to change when a single step change is made to the most sensitive question(s) with respect to Time to Near Peak Adoption.

Responses

Question	Response	Reasoning
Relative Advantage for the Population		
1. Profit orientation	About half have maximising profit as a strong motivation	
2. Environmental orientation	About half have protection of the environment as a strong motivation	
3. Risk orientation	About half have risk minimisation as a strong motivation	
4. Enterprise scale	About half of the target farms have a major enterprise that could benefit	
5. Management horizon	A minority have a long-term management horizon	
6. Short term constraints	A majority currently have a severe short-term financial constraint	
Learnability Characteristics of the Innovation		
7. Trialable	Difficult to trial	
8. Innovation complexity	Difficult to evaluate effects of use due to complexity	
9. Observability	Difficult to observe	
Learnability of Population		
10. Advisory support	Almost none use a relevant advisor	
11. Group involvement	About half are involved with a group that discusses farming	
12. Relevant existing skills & knowledge	Almost all need new skills and knowledge	
13. Innovation awareness	A minority are aware that it has been used or trialed in their district	

Relative Advantage of the Innovation

14. Relative upfront cost of the project	Large initial investment
15. Reversibility of the innovation	Easily reversed
16. Profit benefit in years that it is used	No profit advantage or disadvantage in years that it is used
17. Future profit benefit	Small profit advantage in the future
18. Time until any future profit benefits are likely to be realised	1 - 2 years
19. Environmental costs & benefits	Small environmental advantage
20. Time to environmental benefit	Immediately
21. Risk exposure	Moderate reduction in risk
22. Ease and convenience	Very large increase in ease and convenience
